

Shapley R^2 decomposition
Govt should reduce income differentials (GSS)

Full model $R^2 = 0.308$, $N = 2,335$ (*pairwise-complete correlations*)

By variable

#	Variable	% R^2
1	inequality exists for benefit of rich	21.8%
2	conflict between poor and rich in usa?	8.6%
3	inequality due to lack of solidarity	7.2%
4	rich buy better health care than poor	4.8%
5	rich buy better education than poor	3.9%
6	family income in constant \$	3.5%
7	need to know right people to get ahead	3.4%
8	effort rewarded in america	3.3%
9	r's pay is just	3.2%
10	need wealthy family to get ahead	3.2%
<i>— variables with <3% contribution omitted —</i>		

By cluster

#	Cluster	% R^2
1	wealth zero-sum	23.6%
2	class conflict	15.8%
3	wealth from advantages	15.2%
4	income	7.9%
5	distributive principle / desert	6.2%
<i>— clusters with <5% contribution omitted —</i>
