

Shapley R^2 decomposition

Govt should reduce income differences (Chinoy et al., 2023)

Full model $R^2 = 0.434$, $N = 8,095$ (pairwise-complete correlations)

By variable

#	Variable	% R^2
1	how serious a problem racism in the US is	21.1%
2	generations of slavery make it hard for Blacks to leave lower class	16.7%
3	zero-sum between income classes	14.3%
4	how often women experience gender discrimination	9.4%
5	zero-sum between ethnic groups	6.4%
6	success in life is determined by forces outside our control	5.3%
7	incentivized guess: how much of the top 1% income rise came at the expense of the bottom 50%	4.5%

— variables with <3% contribution omitted —

By cluster

#	Cluster	% R^2
1	discrimination	47.1%
2	wealth zero-sum	15.7%
3	equality/dei zero-sum	8.1%
4	perceived mobility / opportunity	8.1%

— clusters with <5% contribution omitted —
