

Shapley R^2 decomposition

Support raising taxes on high incomes to expand low-income programs (Stantcheva, 2019)

Full model $R^2 = 0.253$, $N = 2,714$ (*complete-case*)

By variable

#	Variable	% R^2
1	raising income tax on high earners would hurt/help the economy	18.3%
2	why a person is rich: effort vs. advantages	13.1%
3	middle class mostly wins if overall taxes are increased	12.4%
4	working class mostly wins if overall taxes are increased	8.8%
5	upper-middle class mostly wins if overall taxes are increased	5.5%
6	Laffer effect: tax cuts on high-income households and the deficit	4.8%
7	lower class or poor mostly wins if taxes on high earners are cut	4.8%
8	working class mostly wins if taxes on high earners are cut	4.0%
— variables with <3% contribution omitted —		

By cluster

#	Cluster	% R^2
1	policy incidence	44.1%
2	aggregate incentives / inequality positive-sum	23.3%
3	wealth from effort/merit	13.1%
4	individual incentives / tax elasticity	5.3%
— clusters with <5% contribution omitted —
