

Shapley R^2 decomposition

Preferred tax rate on the bottom 50% (Alesina, Stantcheva & Teso 2018)

Full model $R^2 = 0.080$, $N = 1,986$ (*complete-case*)

By variable

#	Variable	% R^2
1	perceived chance a poor child reaches top quintile	29.7%
2	perceived chance a hard-working poor child reaches top quintile	14.7%
3	perceived chance a poor child reaches 4th quintile	14.2%
4	age in years	9.4%
5	why a person is rich: harder work vs. more advantages	8.2%
6	everybody in the US has a chance to make it	7.3%
7	perceived chance a hard-working poor child reaches 4th quintile	7.2%
8	why a person is poor: lack of effort vs. circumstances	3.5%
9	whether govt has ability/tools to reduce unequal opportunity	3.1%
— variables with <3% contribution omitted —		

By cluster

#	Cluster	% R^2
1	perceived mobility / opportunity	73.2%
2	age	9.4%
3	wealth from effort/merit	8.2%
— clusters with <5% contribution omitted —
